WEST CASTLE GROUP

HIPAA Security Readiness

Protect electronic health information and prepare for possible future rule changes.

HEALTHCARE SECURITY PLANNING

A business-first approach

The current HIPAA Security Rule remains in effect. HHS has proposed changes to strengthen safeguards, but proposed provisions are not final requirements. West Castle Group can help identify technology questions and connect organizations with suitable cybersecurity and managed IT specialists.

WHAT THIS HELPS YOU EVALUATE

1 Access controls

Review authentication, permissions, and account governance.

2 Networks & devices

Discuss network protection, segmentation, and endpoint visibility.

3 Backup & recovery

Evaluate testing, resilience, and response arrangements.

4 Evidence & oversight

Organize responsibility for policies, reviews, and audit records.

WHEN TO START THE CONVERSATION

- A HIPAA risk analysis or security review has identified gaps.
- A new clinical platform, cloud application, or vendor needs security evaluation.
- Leadership wants a clearer plan for access, recovery, and documentation.

GOOD FIT

HIPAA-covered organizations and business associates reviewing security controls, cloud systems, or provider arrangements.

Discuss healthcare security needs
