WEST CASTLE GROUP

SD-WAN for Multi-Site Business

Build more resilient connections between locations, cloud applications, and teams.

NETWORKING AND CONNECTIVITY

A business-first approach

Software-defined wide area networking (SD-WAN) helps organizations manage network traffic across locations and connections. A well-designed deployment can prioritize critical applications, support cloud access, and simplify day-to-day network management.

WHAT THIS HELPS YOU EVALUATE

1 Application priorities

Give business-critical traffic appropriate network priority.

2 Cloud connectivity

Evaluate paths that support direct access to cloud apps.

3 Resilience

Assess redundant connections and failover options.

4 Operational complexity

Compare provider-managed architectures and support.

WHEN TO START THE CONVERSATION

- Sites regularly lose access to core applications or customer communications.
- Cloud applications are slow or unreliable across multiple offices.
- New locations, renewals, or network consolidation are coming up.

GOOD FIT

Multi-location dealerships, medical practices, retailers, hospitality operators, and growing companies.

Review your network options
