WEST CASTLE GROUP

Cybersecurity Starts with the Business

Clarify your exposure, identify priorities, and evaluate the right specialist providers.

MANAGED CYBERSECURITY

A business-first approach

Cybersecurity purchasing should begin with what the company needs to protect and why, not with a list of tools. We help connect business requirements to relevant supplier specialists across managed security, identity, networks, cloud, and data protection.

WHAT THIS HELPS YOU EVALUATE

1 Access & identity

Review who can access critical systems and information.

2 Network & cloud

Identify where infrastructure and applications need protection.

3 Detection & response

Explore provider-led monitoring and response options.

4 Data & governance

Consider backup, compliance obligations, and AI use policies.

WHEN TO START THE CONVERSATION

- An insurer, customer, or contract now requires new safeguards.
- Your company is expanding, moving to the cloud, or adding AI tools.
- There is no dedicated security team or clear incident-response plan.

GOOD FIT

Business owners, CIOs, IT managers, multi-location operators, and regulated-industry leadership teams.
